Subject: Driftsight Container

Reference: Contract No. HF-CT-695

Dear Joe:

For some time we have been studying the feasibility of supplying you with an all-metal shipping container for the driftsight, part number 500-0151. We now believe that we have found an ideal container for this purpose. The enclosed print will give you some idea of this container. This container will have inside dimensions of 12" x 12" x 57". It will be made of a modular type construction, have six (6) Mil. Spec. handles for easy transportation, eight (8) specially designed latches with which the lead and wire type of security seal can be used. This container will have a specially designed gasketing arrangement, thereby making it pressure tight and water tight to Mil. Spec. MIL-T-945A.

The inside of the container will be lined with Polyurethane foam pads for protection of the instrument. This material was chosen for its protective properties and also its non-marring or non-scratching properties. The case will be finished according to Mil. Spec. covering the subject and will be the same color as the Hand Control Box.

In regard to quantity, please reference a telephone conversation of October 31, 1958, between [redacted] and our [redacted] where it was stated that a quantity of six (6) containers should be sufficient. The price of these containers will be \$505.20 each, or a total of \$3,031.20.

We believe that this proposal is worthy of your consideration, and we hope that you will give us your comments on this subject at your earliest convenience.
